Professional Profile

Software developer specialized in creating full-stack web applications, with experience in HTML, CSS, JavaScript, React, C#, Node.js, and both relational and non-relational databases.

Considered proactive and committed to continuously improving skills and knowledge, staying up to date with new technologies. Always looking forward to contributing positively, collaborating effectively within a team, and solving new challenges along the way.

Technical Skills

Languages and Frameworks:
Java, HTML, CSS, JavaScript, Node.js, React.js, ASP.NET Core

Databases:
SQL Server, MongoDB

Other Tools: Version control (Git), Scrum methodology

Experience

Virtual Farmers' Market Platform

Participated in a team project to develop a virtual farmers' market platform, applying web development with technologies such as MongoDB and Node.js.

HealthTag Project

Contributed to developing an innovative software solution that allows users to store and access their medical information through a scannable bracelet.

Traffic Fine Management Platform Development

Contributed to developing a web application to manage traffic fines, using technologies such as ASP.NET Core for the API and React.js for the frontend.

Development of a Platform to Evaluate Teachers

Participated in a team project for the development of a web application to manage teachers and their evaluations, using technologies such as React.js and FastAPI.
